Tech Stack Overview

Rust, Docker, Postgres, Bash Scripting

Experience

Docker, Postgres, and Bash Scripting

- Containerized a Postgres database using Docker Compose, with strict image tags, port mappings, and named volumes for a reproducible environment.
- Created six bash scripts that use the Docker CLI, and then used mise (a Rust-powered tool version manager and task runner) to turn those bash scripts into custom commands that are displayed via a menu for easy onboarding by running `mise tasks`:
